Application No. 10/747,813 Attorney Docket No.: GTEC 1001-4

## **Amendments to the Claims**

Please **add** claims 78-81 as follows. This listing of the claims will replace all prior versions, and listings, of the claims in this application.

## 1-21. (Canceled)

22. (Previously presented) A medical device for the use in diagnosis and/or treatment of cardiovascular disease in the human body comprising:

a catheter having a proximal catheter end and a distal catheter end and defining a lumen extending from the distal catheter end towards the proximal catheter end, the catheter adapted for use in diagnosis and/or treatment of cardiovascular disease in the human body;

an expandable and contractible, vessel-occluding element positionable near the distal catheter end and placeable in radially expanded and contracted states;

the expandable and contractible, vessel-occluding element comprising a braided element and a membrane contacting the braided element so that the braided element is substantially impermeable when in the radially expanded state; and

the expandable and contractible element having a funnel-shaped surface, when in the radially expanded state, and having a longitudinally-extending opening to permit material to pass therethrough for receipt of material.

- 23. (Previously presented) The medical device according to claim 22 further comprising a second expandable and contractible element positionable at and extendable from the catheter distal end.
- 24. (Previously presented) The medical device according to claim 23 wherein the second expandable and contractible element comprises a balloon.

25-74. (Canceled)

Application No. 10/747,813 Attorney Docket No.: GTEC 1001-4

75. (Previously presented) A medical device for the use in diagnosis and/or treatment of cardiovascular disease in the human body comprising:

a catheter having a proximal catheter end and a distal catheter end and defining a lumen extending from the distal catheter end towards the proximal catheter end, the catheter adapted for use in diagnosis and/or treatment of cardiovascular disease in the human body;

an expandable and contractible, vessel-occluding element positionable near the distal catheter end and placeable in radially expanded and contracted states;

the expandable and contractible, vessel-occluding element comprising a braided element and a membrane contacting the braided element so that the braided element is substantially impermeable when in the radially expanded state; and

the expandable and contractible element having a longitudinally-extending opening, when in the radially expanded state, to permit material to pass therethrough for receipt of material.

- 76. (Previously presented) The medical device according to claim 75 further comprising a second expandable and contractible element positionable at and extendable from the catheter distal end.
- 77. (Previously presented) The medical device according to claim 76 wherein the second expandable and contractible element comprises a balloon.
- 78. (New) The medical device according to claim 75 further comprising a second expandable and contractible, vessel-occluding element positionable at and extendable from the catheter distal end and placeable in a collapsed state and in an expanded, vessel-occluding state.
- 79. (New) The medical device according to claim 78 wherein the second expandable and contractible element comprises a balloon.
- 80. (New) The medical device according to claim 22 further comprising a second expandable and contractible, vessel-occluding element positionable at and extendable from the catheter distal end and placeable in a collapsed state and in an expanded, vessel-occluding state.
